

Coaching: Multicore Programming

The coaching services by MicroConsult offer a major advantage: our specialists introduce their expertise and experience directly in your solution process, thus contributing to the success of your projects. For example, we will work with you to analyze possible applications and the use of new software engineering or management techniques, develop concrete measures for introducing those techniques and then implement them. Doing so, we cover the following areas: system, software and hardware development, (agile) development processes, self-development, soft skills and software law.

Coaching: Multicore Programming

Coaching Topics – Examples

Allocation to memory and cores

Identifying and avoiding performance bottlenecks

Porting from singlecore

Communication strategies

Synchronization techniques

Coaching

We will be happy to provide you with further information or submit a quotation tailored to your requirements.
